EDUCATION

• National Institute of Technology, Warangal

2025

B.Tech in Mechanical Engineering & Minor in Computational Mathematics

CGPA : 8.56

EXPERIENCE

• Oracle

December 2025 - Present

Application Developer

- Designed and integrated **AI-agent workflows with REST API tools and NL2SQL actions**, enabling agents to retrieve, analyse, and act on supply chain data through natural-language interactions.
- Built a **Supply Chain Simulator** prototype to analyse datacenter cable demand and supply, enabling business users to simulate and evaluate planning scenarios upfront and plan accordingly.
- Refactored the supply allocation algorithm from a **sequential sort-based approach to a linear optimization model**, optimizing demand-supply netting while accounting for multi-level BOM constraints.

• Blue Yonder

January - December 2025

Associate Software Engineer

- Built an integration pipeline using GitHub Actions and **REST APIs** to publish automated test results to **Jira Zephyr**, reducing manual effort and improving test lifecycle management efficiency
- Built a custom **VS Code extension** to trigger feature-file execution directly through GitHub Actions reducing manual effort by 70%.
- Developed automation feature files and step definitions for **Retail Planning** narratives using the BDD framework with WebdriverIO, focussing on application stability and seamless user experience.

• CloneMyTrips

May - July 2024

Intern

- Collaborated as part of a development team to create a minimum viable product (**MVP**) of the app
- Developed an admin panel, created landing page and integrated payment gateway
- Utilized YouTube and Meta APIs to extract and summarize trip data from YouTube Shorts and Instagram Reels, enabling personalized bucket lists and enhancing the context awareness of the travel planning chatbot(**Dora AI**).

PERSONAL PROJECTS

• Multi-Agent Chat Rooms

Link

Developed backend for multi-agent chat rooms using Langgraph framework

- Developed customizable chat rooms where users can define **agents** with unique personas and behavioral traits.
- Implemented an **orchestrator** to manage agent interactions, ensuring the most relevant agents respond based on shared conversational context.
- Integrated context retention and retrieval from a **MongoDB vector database** to fetch relevant past dialogues for more coherent and contextually accurate responses.
- Tools & technologies used: FastAPI, MongoDB, LangGraph

TECHNICAL SKILLS AND INTERESTS

Languages: C++, Python, JavaScript, Java, SQL

AI/ML: Agentic AI, RAG, Prompt Engineering, Generative AI

Libraries/Frameworks : React.js, Express.js, FastAPI, Django, LangChain, Node.js

Databases : OracleDB, MongoDB, MySQL, PostgreSQL

Developer Tools : Github, Colab, VS Code, IntelliJ, Postman

Coursework : Data Structures and algorithms, Database Management System, Operating System, Machine Learning

ACHIEVEMENTS

- Secured Rank **15** in **GFG** across college by solving a wide range of DSA problems
- Selected for the Institute **Merit Scholarship** awarded to the top **10%** of students.

CERTIFICATIONS

- Certified by Oracle University on **Oracle Fusion Agent Studio for Developers**
- Certified by LinkedIn Learning on **GenAI with Multi-Agent LangChain: Building Real-World Applications**
